VALVES & SEATS

UTEX® X-TENDED LIFE SYSTEM: XLQC QUICK CHANGE VALVES & SEATS

REDUCE DOWNTIME / INCREASE RUN TIME WITH UTEX QUICK CHANGE VALVE & SEAT REVOLUTIONARY WEAR COMPONENT DESIGN

The XLQC X-Tended Life Quick Change Valve and Seat Assembly was created to save you time and money. State-of-the-art materials and engineering extend the life of the part. The revolutionary self-centering design makes changes safe and easy, and efficient—*saving hundreds of man hours and thousands of dollars*. Keep your pump online with UTEX, the leading supplier of oilfield pump expendables.

X-TENDED LIFE SERIES FEATURES & BENEFITS:

- **Self-centers** the valve for even wear, reduces urethane fatigue
- **Eliminates need for hydraulic seat puller** when replacing wear items
- Industry-leading, durable material **options** and sizes available to fit your specific wellsite
- **Interchangeable components** that simplify expendable changes and promote speed of reassembly
- **XL Fluid Ends Maintenance Tools** designed to be user friendly, wear resistant, and stronger than competitive tools

/ Seated

/ Typical valve and upper seat with more than 80 hours @ 10,000 psi and 100 mesh

**XLQC VALVES & SEATS
WORK WITH ALL STANDARD
VALVE OVER VALVE FLUID
ENDS 3/4" PER FOOT
TAPERED BORES**

Superior Expendables Designed & Manufactured in the USA by UTEX®

UTEX® Makes Pump Maintenance Quick And Cost-Effective.

UTEX XL SERIES: XLQC QUICK CHANGE VALVES & SEATS

Unprecedented Ease of Use, Unmatched Performance

UTEX state-of-the-art applied technology and intuitive, purpose-built tools have ushered in a new era of pump maintenance. The innovative and rugged design of the UTEX XLQC Valve & Seat Assembly provides quick and efficient change out of wear items. The revolutionary design also lowers your expendables cost: purchase the complete assembly

once, replace only components over the next several hundred hours of operation.

XLQC's inverted urethane design self-centers the valve for even wear and reduces urethane fatigue.

UTEX premium metals and urethane materials are proven to perform in the harshest conditions. Paired with the Quick Release Valve Seat Puller, changing all 10 valves and upper seats is faster, safer, and a one-man job that can be completed within minutes.

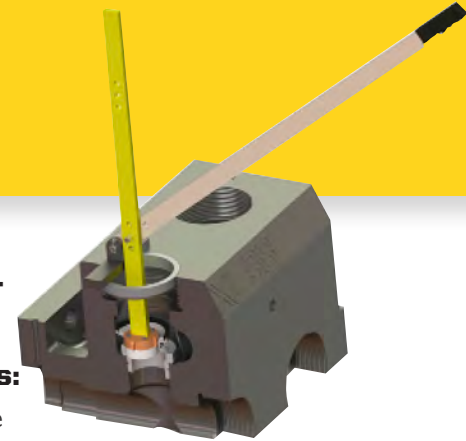

Refresh Your Fluid Ends In Two Simple Steps:

1. Remove the valve
2. Using the UTEX Quick Release Valve Seat Puller, pull and replace the upper seat. The seat anchor stays in place.

In just a few minutes, your assembly is like new —no heavy hydraulic pancake jacks, spacers, all-threads or extra labor required.

Quick Release Valve Seat Puller

The simple, lightweight design of the Quick Release Valve Seat Puller allows crew to easily clock and lift the valve magnetically, then engage and remove the upper seat. **It's that easy!**

LOWER YOUR COST OF OWNERSHIP WITH THE COMPLETE UTEX SYSTEM.

Ask your UTEX Sales Rep how you can reduce your cost of ownership even more when you deploy UTEX X-Tended Life Fluid Ends and expendables as **a complete system.**

Knowing that equipment is only part of the equation, UTEX also offers innovative, fluid ends maintenance tools designed to be user-friendly, tough, easier and more efficient to use than competitive alternatives.

UTEX ADVANTAGES:

- **Unmatched customer service**
- **Solution-focused** products and services
- **EPI Supply Shield on-site expendables inventory management** unit designed to help maximize uptime, manage district expenses
- **Customer loyalty incentives** created to make using the complete UTEX system even more cost-effective

FLUID END TRAINING CLASS

Do you have a sea of green hats on your wellsite? An expertly trained crew member can minimize downtime, reduce premature failure, and increase the readiness of the frac fleet. Contact your local UTEX or EPI Technical Sales Representative today to **schedule a complimentary, on-site fluid end training class.**

Ask your UTEX Sales Rep how you can start reducing your cost of ownership today when you partner with UTEX.
